Berkshire Introduces MicroSeal SuperSorb™ 2-Ply, Bonded Sealed Edge Wiper

– Engineered to combine quality, performance and low cost in use for critical environments –

July 2005, Great Barrington, MA — Berkshire introduces a highly absorbent, ultra-sonic heat sealed edge, 2-ply 100% polyester wiper designed to address specific absorbency concerns and durability for the critical environments.

Proprietary knitting and laundry technique combined with a bonding application create a product which possesses super absorbency capacity along with cleanliness and durability. The polyester knit wipe is an excellent choice in critical component wiping applications, where high concentrations of liquid are in use.

In addition to delivering performance and cleanliness to critical environments, Berkshire is committed to strict quality control guidelines. To guarantee consistent quality, Berkshire follows the ISO Standards and its Quality Management System is ISO 9001 registered. Berkshire's technology programs are designed to produce the highest value manufacturing processes and products driven by the continuous improvement requirements of critical environment customers.

Berkshire Corporation serves critical environment customers worldwide with a full line of contamination control products including cleanroom wipers, glove liners, documentation, swabs, face masks and Gamma Hol sterile alcohol for regulated and non-regulated environments.

The Berkshire line of wipers includes woven, non-woven and knitted materials made of natural and man-made fibers. A Berkshire technical sales specialist is available to work with customers to determine the right product for specific application needs.
